PRICING NOTES

- ¹ Each Aruba Supervisor Card, 800 and 2400 platform ships with the appropriate version of General Availability ArubaOS^(tm) software as standard.
- ² Each Aruba 6000 series line card (LC-2G24F, LC-2G24FP or LC-2G) or 2400 series mobility controller requires the purchase of at least 1 x GBIC adapter to provide physical interface connectivity to the
- ³ Aruba application software packages may be optionally purchased and installed on any Aruba platform in order to achieve the desired level of functionality. The Aruba platforms are capable of supporting multiple or all applications simultaneously.
- ⁴ Electrical surge protection equipment (in-line filters etc) are recommended for use with access points in outdoor installations.
- ⁵ All documentation set purchases are only available when purchased with an Aruba wireless switching platform.
- ⁶ The required country specific AC power cords must be specified separately on sales order. They are supplied Free of Charge with any 800, 2400 or 6000 PSU order.
- ⁷ Access Points supplied as standard without AC power adapters. Please order separately the country specific power adapter kit if AC power is required.
- ⁸ Wireless Grid Point / Access Point model 60 and 70 are supplied without removable antennas. Antenna part numbers AP-ANT-1 : 12 are available as orderable options and are supplied one per part number (with the exception of AP-ANT-1P, supplied as a pair of antenna). Two are required per AP-60 in order to support antenna diversity.
- ⁹ Redundant systems require matched configurations. Thus, when configuring a redundant system, select the same application software modules as the primary system. 800, 2400, and 6000 systems with one or two supervisor cards support redundant configurations.
- ¹⁰ Remote AP licenses are cumulative.
- ¹¹ Indoor access point products (AP-60/AP-61, AP-65, AP-65WB, AP-70, AP-120 Series, and RAP-5WN/RAP-5) are covered by Aruba's Limited Lifetime Warranty. For the life of the product, defined as up to five years after Aruba announces the product's end of sale, Aruba warrants that the products will substantially conform to Aruba's documentation. This warranty is non-transferable except in the case of a change of control. For more details on the warranty terms and exclusions see Aruba's website at www.arubanetworks.com

Aruba 3000 Series STANDARD BUNDLES are base level WLAN solutions, orderable by a single part number. STANDARD BUNDLES include complete hardware configurations, and ArubaOS operating system with ARUBA RF MANAGEMENT. See Aruba 3000 Series Software Applications section to choose application software modules.

ARUBA 120 SERIES 802.11N DRAFT 2.0 UPGRADE SOFTWARE

ARUBA 120 SERIES 802.11N DRAFT 2.0 UPGRADE SOFTWARE is an optional addition to ArubaOS that upgrades Aruba AP120abg/AP121abg/AP124abg/AP125abg Access Points to support 802.11n Draft 2.0 functionality. These modules can be added to any Aruba Controller. Licenses are per access point, and cumulative. Thus, multiple 802.11n Upgrade licenses can be purchased for a single Controller. Licenses are specific to each model of AP120 SERIES upgradeable access point.

ARUBA CONTROLLER APPLICATION SOFTWARE MODULES (ARUBAOS 5.0)			

Aruba Wireless Networks' application software modules allow functionality and capability to be custom tailored to suit individual wireless networking needs. The following Aruba application software modules may be purchased for any Aruba Controller running ArubaOS to create an optimal configuration.

ArubaOS (STANDARD WITH ALL CONTROLLERS)

The base ArubaOS operating system (supplied as standard with every Aruba Controller) is a WLAN switching and service ready operating system capable of running on any Aruba Controller (804, 800, 2400 and 6000 series). The base ArubaOS functionality consists of the ARUBA RF MANAGEMENT application (wireless employee, guest and voice service, L2/L3 switching, Access Point termination, wireless 802.1x, MAC based authentication, local user database and advanced wireless management: site survey, Adaptive Radio Management (ARM) RF environment manager, RF planning), support for 3rd party APs and a WEB UI management interface, Rogue AP detection, and Secure Enterprise Mesh for Indoor Access Points. Support for redundancy is included (requires a redundant system). In addition to the base ArubaOS functionality, additional software modules as described below can be added by software upgrade to any Aruba Controller.

Products listed here are FIPS validated and TAA compliant. Please refer to the main page for each Controller to pick the remaining options and Software Modules. FIPS Security Kit is included.

Aruba Networks offers two government validated ArubaOS operating systems: ArubaOS 2.4.8 and ArubaOS 3.3.2. ArubaOS 2.4.8 is FIPS validated and Common Criteria EAL-2+ validated. ArubaOS 3.3.2 is FIPS validated and is in-process for Common Criteria EAL-4 validation. The operating software version that is appropriate for the organization's requirements must be specified at time of order. Please contact your Aruba Networks reseller or Company Representative to understand the hardware and software feature support differences between these two ArubaOS operating systems.

ARUBA WIRELESS ACCESS POINTS (FIPS/TAA Compliant)

For any organization that requires FIPS-validated WLAN architectures, any Aruba Networks access point can be deployed in Campus, Mesh and Remote Networking modes in a FIPS compliant manner, and do not require the FIPS-specific AP models. Campus, Mesh and Remote Networking deployments take advantage of Aruba's centralized cryptology processing architecture where the Aruba Controller -- and not the access point-- performs WLAN cryptology functions which ensures a FIPS compliant end-to-end cryptology boundary.

Aruba does offer FIPS-validated access points where the access point may have to perform cryptology for two special-case situations: Mesh Bridging and Remote Network Split Tunneling. In the case of Mesh Bridging, the access point is deployed to bridge traffic from a wired Ethernet network or device to the WLAN. The "wired network" traffic passing through the access point's Ethernet port needs to be encrypted, thus requiring the access point to be FIPS validated. Remote Network Split Tunneling mode is a special operation of Aruba's Remote Networking capability, where it may be desirable for Internet-destined traffic to pass directly to the Internet host as opposed to having to pass through the HQ organization's controller first. In this case, the access point must perform cryptology functions on Internet-destined traffic before leaving the remote network, thus requiring FIPS validation on the AP.
